What is the Northern Ireland Life and Times Survey?

The Northern Ireland Life and Times (NILT) Survey was launched in the autumn of 1998. Its mission is to monitor the attitudes and behaviour of people in Northern Ireland annually to provide a time-series and a public record of how our attitudes and behaviour develop on a wide range of social policy issues. The survey is run on a modular format and while two modules are repeated every year (*Political Attitudes* and *Community Relations*) the rest of the survey varies annually, with all the modules designed to be repeated in years to come.

The survey aims to provide:

- A local resource for use by the general public
- A data source for a more theoretical academic debate

We would like to take this opportunity to thank the funders for the 2002 survey who have been most supportive of the overall aims of the project. They include Office of the First Minister and Deputy First Minister, Economic and Social Research Council (ESRC), Northern Ireland Social and Political Archive (ARK) and the University of Ulster.

Links with other surveys

The Northern Ireland Life and Times Survey is a direct descendent of the Northern Ireland Social Attitudes Survey (NISA) which ran from 1989 to 1996. NISA was a sister survey to the British Social Attitudes Survey (BSA), and, by running the same modules as BSA, it provided a time-series of social attitudes allowing comparisons with Britain. Against the background of the new political arrangements in Northern Ireland it was agreed that the new Northern Ireland Life and Times Survey would be better served by cutting its links with its British counterpart. NILT now carries on the tradition of a time-series of attitudes but has shifted the focus away from comparisons with Britain. It is largely Northern Ireland focused, it is social policy focused, and it is designed to be used by the wider public in Northern Ireland. Nonetheless, every year includes a substantial component which either continues an old NISA time-series, or replicates a BSA module.

Each year over 30 countries participate in the International Social Survey Programme (ISSP) in which the same module of questions is asked cross-nationally. Northern Ireland has taken part in this exercise since 1989 via NISA until 1996, and then via NILT. The 2002 module covered *Family and Gender*. Full ISSP datasets can be obtained from the ZentralArchiv in Köln, Germany where the datasets from the member countries are assembled. Information on the ISSP can be found at their web site: http://www.issp.org, while the English version of the ZentralArchiv web site is at http://www.gesis.org/en/za/index.htm.

Technical details of the 2002 survey

The overall design

The 2002 Northern Ireland Life and Times Survey involved 1800 face-to-face interviews with adults aged 18 or over. The main interview was carried out using computer assisted personal interviewing (CAPI) and the respondent was then asked to complete a self completion questionnaire. In 1998, 1999 and 2000, the Young Life and Times Survey ran alongside the adult survey and interviewed young people aged 12 to 17. However, during 2002 the survey team undertook a review of Young Life and Times, and so no young persons' survey was undertaken.

Survey content

The modules included in the 2002 survey are:

Background
Women in Politics
Political Attitudes
Rights of the Child
Europe
Community Relations
Family and Gender

Fieldwork

All interviews were conducted during the period October 2002 to mid January 2003. Interviewing was carried out by social survey interviewers employed by Research and Evaluation Services (RES). All fieldworkers attended one of three briefing sessions conducted jointly by RES and members of the NILT project team. All interviews were conducted in the respondents' homes. Interviewers made up to a maximum of five calls before the person identified in the sample was deemed to be 'non-obtainable'. The self completion questionnaire was either completed and handed back to the interviewer at the time of the main interview, or the interviewer called back at a later stage to collect it.

Advance mailshot

Households identified in the sample were sent an advance letter which explained the background to the survey, outlined the method by which an individual respondent would be selected from the household, and requested co-operation with the project. The letter provided households with contact details for the project team and RES, and also confirmed that a donation of £1 would be made to Action Cancer on behalf of each respondent.

Sampling design

The survey was designed to yield a representative sample of men and women aged 18 and over living in Northern Ireland. The Postal Address File (PAF) was used as the sampling frame for the survey and a simple random sample of addresses was obtained after stratification into three geographic regions (Belfast, East of the Bann and West of the Bann). This was done to ensure the adequate representation of areas of lower population density and is standard practice in Northern Ireland social surveys. At selected addresses, a Kish grid procedure was utilised to randomly select one individual to be the subject of the survey.

The sample selected was slightly larger than necessary in order to provide reserve addresses. Interviewers were instructed to make a total of five calls, or to have received a refusal or other information confirming that an interview would not be obtained, before being issued with reserve addresses. This was to ensure optimal response from the main sample.

Response rate

Table 1.1 shows the status of addresses, and the number of addresses in scope. **Table 1.2** shows the reason for non achievement of interviews with individuals drawn in the sample. **Table 1.3** shows the response rate for the self completion questionnaires.

Table 1.1 Status of addresses		
Total Addresses Issued	Vacant /Derelict /Commercial	Total in scope
2973	80	2893

Table 1.2 Breakdown of response				
	No.	%		
Achieved	1800	62		
Refused	631	22		
Non-contact	405	14		
Other	57	2		
Total	2893	100		

Table 1.3 Completion of self completion questionnaires		
Number of main stage interviews	1800	
Number of self completion achieved 1459		
% of self completion achieved	81	

Sampling errors and confidence intervals

Table 1.4 sets out sampling errors and confidence intervals at the 95% confidence level relating to a Simple Random Sample design as used in the survey. Note that the margin of error for all sample estimates is within the parameters of \pm 4.5%.

Table 1.4 Sam	pling errors and c	onfider	nce intervals fo	r key variables
		%	Standard Error	95%
		р	of p (%)	Confidence limits
Age	18 - 24	8.3	0.65	7.03 – 9.57
	25 - 44	33.3	1.11	31.12 – 35.48
	45 - 64	33.3	1.11	31.12 – 35.48
	65 - 74	14.8	0.84	13.16 – 16.44
	75+	10.2	0.71	8.80 – 11.60
Sex	Male	43.1	1.17	40.81 – 45.39
	Female	56.9	1.17	54.61 – 59.19
Marital status	Married/Cohabitin	49.0	1.18	46.69 - 51.31
	Single	25.8	1.03	23.78 - 27.82
	Widow/Div/Sep	25.2	1.02	23.19 – 27.81
Religion	Catholic	38.9	1.15	36.65 – 41.15
_	Protestant	49.5	1.18	47.19 – 51.81
	None	9.7	0.7	8.33 – 11.07
	Other	0.7	0.2	0.31 – 1.09
	Refused	1.1	0.25	0.62 – 1.58

Data preparation

Main survey data was collected via the 'Surveycraft' computer aided interviewing package. This was converted to SPSS format prior to analysis. All paper based data (self completion modules) were entered via the SPSS data entry system. All data were merged and subject to an extensive range of inter and intra variable logic checks.

Deriving social class variables

Occupational variables from the data set were derived using the 'Computer Assisted Standard Occupational Coding' (CASOC) software. This programme enables a match to be made between the text describing the respondent's occupation and the most similar occupational description taken from the Registrar General's Standard Classification of Occupations. When a match is made, the system automatically assigns the official three digit code from the 'Standard Classification of Occupations' to this case. This three digit code is the direct basis for the derivation of related information on a social class grouping.

Getting the data

Survey results are put on the Internet six months after the end of fieldwork (http://www.ark.ac.uk/nilt), with frequencies for every question and a breakdown by age, gender and religion on offer.

A 'query' service or helpline is run for those who need additional tables or have any query about the survey. Users can either contact one of the Life and Times team directly (see Contact Information on page 11), or via the feedback form on the web site (http://www.ark.ac.uk/nilt/havesay.html). A leaflet advertising the existence of the data and how to get hold of it is also sent to schools, voluntary groups, civil servants, journalists and assembly members. The funders of the survey receive the dataset somewhat earlier than the public (three months after the end of fieldwork). Nonetheless, one of the guiding principles of the survey is that the information is made available to all and that no one person or organisation has ownership of the results. The web site also allows users to download the data in order to carry out their own particular statistical analyses.

Using the data

The documentation provided here is not a traditional 'technical report' and is designed to be easy to use rather than technically exhaustive. Users who intend to carry out sophisticated statistical analyses or to manipulate the data to investigate particular features may well want to come back to us for more precise details on the survey set-up.

The data have been tested extensively, but if you do find anything that looks like a mistake, please let us know as soon as you can.

Weighting the data

This data set should be weighted in order to allow for disproportionate household size, using the variable *WTFACTOR*. However, if analysing just the few household-based variables on their own (for example, tenure and household income), weighting should not be used.

Following publication of information from the 2001 Census of Population, we commissioned a piece of work to verify the sampling and weighting methodology used by NILT. A new weighting factor (*WEIGHT2*) was created. However, compared with the original factor, the effect on the data file was negligible.

We have included both weighting variables in the datafile. Please note that *WEIGHT2* should be applied when using **only the 2002** survey, and should not be used if comparing 2002 with other years.

Notes and Errata

Categorisation of Religion

In order to maintain anonymity, the following religious denominations have been amalgamated to form the 'Other Christian' category within the RELIGION and FAMRELIG variables:

Brethren

United Reform Church (URC)/Congregational

Pentecostal

Church of Scotland

Elim Pentecostal

Reformed Presbyterian

Non-subscribing Presbyterian

Salvation Army

Church of Nazarene

Jehovah's Witness

Mormon

Evangelical

Metropolitan

Seventh Day Adventist

Quaker

At the back of this documentation is a list of other variables on the dataset. This includes the variable RELIGCAT, which categorises the variable RELIGION into 3 groups: Catholic, Protestant and No religion.

The Protestant category was created by grouping together the following denominations:

Church of Ireland/Anglican/Episcopal

Baptist

Methodist

Presbyterian

Free Presbyterian

Brethren

United Reform Church (URC)/Congregational

Pentecostal

Church of Scotland

Elim Pentecostal

Reformed Presbyterian

Non-subscribing Presbyterian

Salvation Army

Church of Nazarene

Jehovah's Witness

Mormon

Evangelical

Metropolitan

Seventh Day Adventist

Quaker

Protestant – no denomination

Christian – no denomination

However, users of the data may wish to create their own categories by recoding the RELIGION variable.

We have omitted other religious groups from the RELIGCAT variable as the numbers were too small to use for meaningful analysis.

Family and gender: ISSP module

In 2002, the ISSP module (Family and Gender) was included in the self completion questionnaire. However, due to technical problems, approximately one third of respondents completing a self completion questionnaire were given slightly different versions of some questions (from an earlier draft). Therefore the data file only includes responses to the final version of the questionnaire. Questions from the Women in Politics and Political Attitudes modules - which were also included within the self completion questionnaire - are not affected.

If you have any queries, please contact one of the Life and Times team (see contact details on page 11)
